# Finishes types

# ■ Finishes

## Tumbled

### Application

walls & floors (interior & exterior)

**Tumbled:** Tumbling is vibrating the tiles with some special stones to give the surface a textured and antique look whereby the edges are rounded and imperfect

## Striped

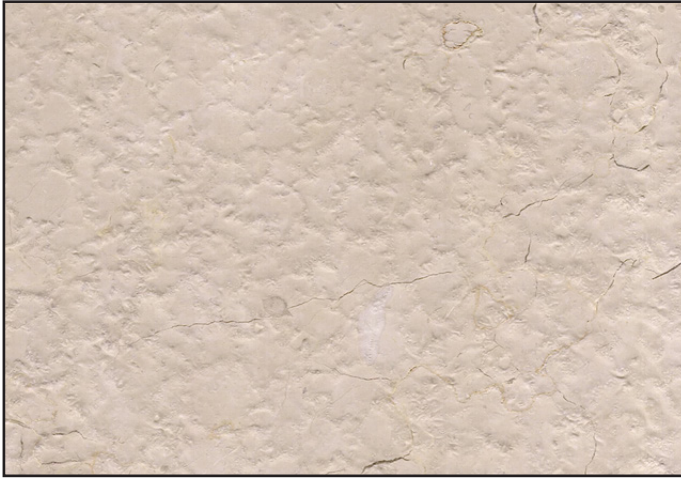

**Striped:** A Stone finish with parallel grooves cut into it. Available with 1-4 grooves to the inch (254mm), the finish may be executed by hand (hand-tooled) or machine (machine-tooled)

### Application

walls (interior & exterior)

# ■ Finishes

## Acid

### Application

walls & floors (interior & exterior)

**Acid treated:** Stone surfaces are treated by acids to give them a spectacular antique look

## Flamed

**Flamed:** Applying blowtorch-strength heat to the surface of Marble & Granite, this actually pops some of the crystals and creates a deeply textured surface which produces flamed Stone.

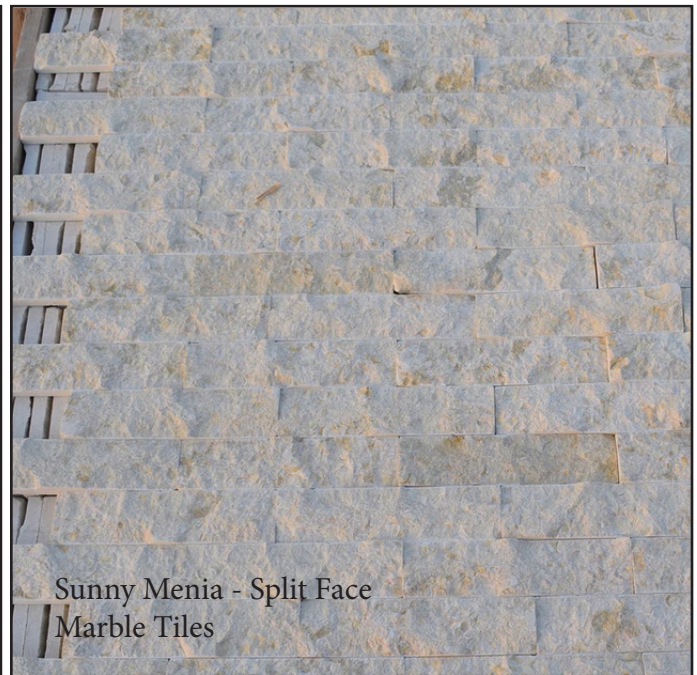

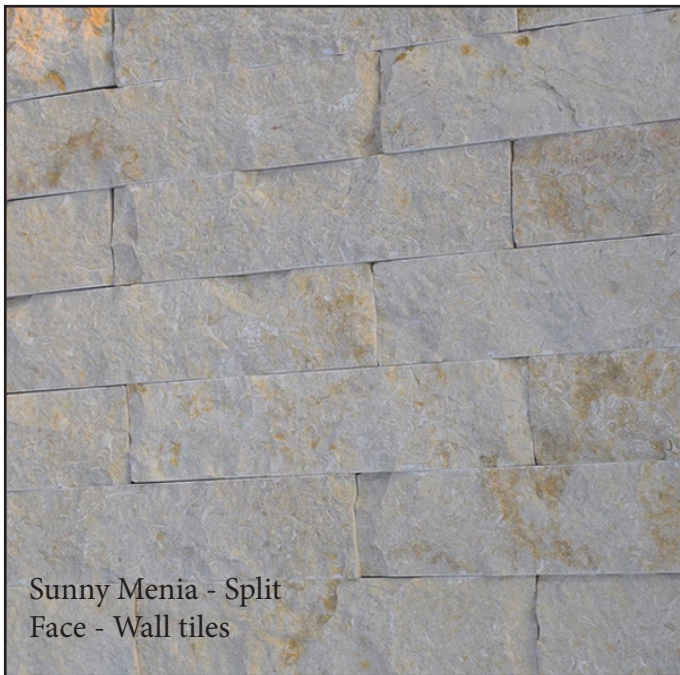

### Application

walls & floors (interior & exterior)

# ■ Finishes

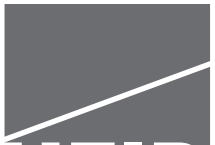

## Split Face

**Split face:** Split face surfaces are those which are left natural after manual splitting of Stone along planar surfaces. This finish shows the actual natural earthy tone of the Stone.

### Application

walls & floors (interior & exterior)
